8-Year-Old Boy's 'Severe' Headaches Likely Caused by 5G Tower Near School

An 8-year-old developed severe headaches when he started attending a school near a 5G cell tower, according to a new peer-reviewed case study. The findings suggest the high levels of radiofrequency radiation at school caused the boy's symptoms, the researchers concluded.

By Suzanne Burdick, Ph.D.

A previously healthy 8-year-old boy suffered "severe" headaches when attending a school just 200 meters from a 5G cell tower, according to a new peer-reviewed case study.

The study, published in the Annals of Clinical Case Studies, reported that the Swedish boy — who had no prior history of headaches — also experienced dizziness and fatigue.

The symptoms stopped when the child started wearing a radiofrequency (RF) radiation-blocking cap, jacket and scarf to school.

The report also noted the boy didn't have the symptoms at home where levels of RF radiation were much lower.

The findings suggest the high levels of RF radiation at school caused the boy's symptoms, the researchers concluded.

"The Wuhan Cover-Up" by Robert F. Kennedy Jr.

ORDER NOW

This is the seventh scientific report on the human health effects of real-life 5G by Dr. Lennart Hardell, a leading scientist on cancer risks from radiation, and Mona Nilsson, managing director of the Swedish Radiation Protection Foundation.

Their reports are "provocation" case studies that detail how exposure to 5G RF radiation "provokes" the onset of symptoms, which quickly disappear when the exposure stops or is minimized.

Hardell, an oncologist and epidemiologist with the Environment and Cancer Research Foundation who has authored more than 350 papers — almost 60 of which address RF radiation, believes the global rollout of 5G needs to stop because it's harming people, especially kids who are "more vulnerable to toxins than adults."

"A society forcing toxic exposure on innocent people, especially the most sensitive, cannot be accepted," he told The Defender.

Nilsson agreed. "Children are taking part on a massive scale in a huge and dangerous experiment — without their or their parents informed consent — which may lead to serious long-term consequences," she told The Defender.

Radiation levels were highest in schoolyard

For the study, the boy's mother completed a questionnaire about her son's symptoms at school and at home.

Hardell and Nilsson took repeated measurements of the RF radiation levels at the boy's school and his home.

At school, the boy developed daily headaches that reached an intensity level of 10, the highest level on a 10-grade scale. He also felt dizzy and tired.

RFK Jr. and Brian Hooker's *New* Book: "Vax-Unvax"

Radiation levels were highest in the schoolyard, ranging from 83,332 to 267,536 microwatts per meter squared (µW/m2). In the classroom and hallway, measurements ranged from 2,560 to 76,590 µW/m2.

The radiation levels at the boy's home were "considerably lower," they said, ranging only from 25 to 1,040 µW/m2.

At home, the boy was generally symptom-free with an occasional mild, or level-2, headache that quickly went away. Hardell and Nilsson noted this headache could have been residual from the child's exposure to high levels of RF radiation at school.

'As long as radiation hazards are not acknowledged, they go unnoticed'

The boy's case study is important, the authors said, because many kids are likely experiencing negative symptoms from 5G but don't associate the symptoms with the technology.

Doctors and parents are generally uninformed about the health hazards associated with RF radiation exposure, so they're unlikely to consider it a factor when trying to figure out why a child is sick.

"As long as radiation hazards are not acknowledged," Hardell said, "they are not noticed."

Adding to the problem is the fact that most countries, including Sweden, have adopted regulatory guidelines and EMF policies recommended by the World Health Organization (WHO) that assume negative health effects only occur when the levels of RF radiation are high enough to heat human tissue, Hardell and Nilsson said.

Such guidelines — including those set by the Federal Communications Commission in the U.S. — don't take into account long-term exposure to lower levels of radiation, like what's used in 5G.

Your support helps fund this work, and CHD's related advocacy, education and scientific research.

DONATE NOW

Moreover, current regulatory guidelines ignore recent research showing a "clear association between exposure to RF radiation and cancer," Hardell and Nilsson said.

So not only do current guidelines allow for children like the one in the study to suffer from severe headaches, but the guidelines do nothing to protect kids from possibly developing cancer later in life.

In 2011, the International Agency for Research on Cancer (IARC) at the WHO classified RF radiation as "possibly carcinogenic to humans (Group 2B)." But IARC needs to update that classification based on more recent research, they said.

According to Hardell and Nilsson, RF radiation should be classified as a "human carcinogen, group 1." And it would be classified that way "if evaluated objectively without conflicts of interests," they wrote.

"This classification," they added, "should have a major impact on prevention measures."

One way to get rid of the antenna that are killing us to cancel our cell phones and start using landlines again. What a concept.

I still have my landline, but service is terrible. Frontier is legally required to offer this service, but they make it so crappy& hard to get them to correct it that many customers give up & relinquish their landlines.

Yes that strategy is used ad naueam where services are interrupted, denied or made to be so slow and cumbersome that we rush into the arms of the beast as they intended us all along to do. This has been applied to everything in this new system. One thing done where i am at is they do not actually offer landline service really at all, the only thing offered is the voice over internet through the high speed modem that to me based on my symptoms are just as deadly as cell phones that evidently these devices are not even accepted in many online forms when entered they treat my nimber as if it is for a hearing impaired person.

I was continously trying to get this service and they play tricks like what was done is they make me believe i will be allowed to continue to have this service but secretly i was signed up for a plan that included a free cell phone thst they expect me to sign up for when the two year term ends that is one of their dirty tricks to force compliance just like it is done with smart meters where i was told i was on the opt out list and then they waited until i was not home then came quickly, crossed off the words opt out they had written on my old meter and put the new one on anyway. For me the meter attacks my heart and legs either that or it is other weaponized RF devices another story for another time because that too is being done.

I'm sure they will eventually no longer offer landlines much like they will take away our gas stoves. It truly is coming down to the wire. Time to start downsizing so when they take more and more away we won't feel the impact as much. Thing is, technology should have stayed in the hands of that use it for good purposes; so far, technology has done nothing but destroyed.

It is disgusting that those men and women that are responsible for the roll out of 5G so far have refused to even acknowledge that there are health issues from using this technology. I have to wonder; would they feel any differently if it were their son or daughter who was adversely affected?

It was acknowledged, kind of when the people started dying in Wuhan, the place where the 5G equipment was made and the first place in the world to roll out 5G, although they said it was bats causing it!!!

What do you think they were doing while we were locked up in our homes>?

Planting antennae all over. They would not have been able to do it otherwise.

Seems to me they would have because no one really believes it causes harm. They think it is other things like poor diet, lack of exercise too much junk food etc. Where I am they were the first to lock down without a single case then the 5g came soon after. I just watched an interview on Novara Media with Yanis Varoufakis where the interviewer was lamenting the lack of 5g in Britain stating how unfortunate it was that China had ceased its 5g infrastructure building effort there complaining this will make them irrelevant in this new economy to which Yanis confirmed Europe is dead because of this simple fact that they are not in the forefront on these technologies, it is insane to think technology that is also used as a weapon of war we are advancing knowing its harms, and what if we all reject it they act as though the entire globe will collapse.

It wouldn't surprise me at all if the whole thing was orchestrated so that they could lock us down so that they could then put the towers up while we were all locked down. If they'd already paid for it and they knew people were waking up to this then there could have been disruptions to them putting them up. Not enough people know the dangers of 5G yet though and the kids who mostly have good immune systems now and spend most of their lives looking at their phones want the newest tech. They will be middle aged before it hits them, it will be too late then and the next lot of youngsters will want to be staring down at their phones etc ad infinitum. All the while the numbers will be getting lower and lower and all this will be swept under the rug like they are doing now with those who died suddenly. As far as the elite owned media are reporting, nothing is happening.

It shouldn't surprise you that the whole thing was orchestrated. Because it was.

And it continues and in full force. Nothing is out of the question any longer This is no longer something that is going to just go away. They have nothing to lose and they are going for it all.

The days of "shock and awe" are beyond us.

Now, it more like waiting ducks sitting in the middle of a pond.

There is nowhere to hide. So the only option is not to support or encourage the sale, purchase or distribution of their poisons.

We have control over what we buy. This is a good first place to hit them where it hurts.

If you know nothing about RFR dangers, start here: https://ehtrust.org/key-iss... . 4G has created cancer clusters numerous places near schools and residential areas. Like mRNA shots, 5G and 6G continue to treat humans like scientific guinea pigs.

Our youngest suffered migraines every morning at high school one year suddenly. Whether it was the fluorescent lights (which are literally little computers flickering at some astronomical amount every second) or the WIFRY throughout the school. Her pediatrician wanted her to take downers to help her sleep & I had to contain myself from having the police called. I was livid.

I removed her from school within the month & she did online, migraines went away. The gaslighting with these deadly towers/frequencies needs to stop but the cell addicts will never see their obvious addiction.

The measured number in this article, if I'm reading it correctly, of 83,332 to 267,536 µW/m2 (or 83 to 267 mW/m2) from 200 meters away are so far off the charts it's unfathomable. It's not even arguable. I have a decent meter, and those numbers are similar to standing about 4 feet in front of my microwave oven. Everyone today needs a meter of any grade, and develop a sense of magnitude for these readings.

Building Biology Standard (based on medical evidence, "Standard of building biology testing methods," Inst. Building Biol. + Sustainability, 2008.)
No concern < 1 uW/m2 (a uW is 1e-6 W, or 1 millionth of a Watt)
Slight concern 1 – 10 uW/m2 protective
Severe concern 10 – 1000 uW/m2
Extreme concern > 1000 uW/m2 (=1 mW or .001 W/m2)

Since 1993 the FCC has worked to make Americans and their representatives confused about endless facts regarding the relationship between wireless technologies and being human. For over 30 years the FCC tactics have been designed so the people and their representatives dont know the truth on what to believe or not believe on wireless vs. wired technologies. And that has been to ensure through perception management which way the majority would go and that is in the direction of not only accepting, but wanting everything done wirelessly. In 2024 its clear the FCC has sucessfully ensured the masses are increasingly dependent on the wireless aspect of telecommunications controlled by the FCC, wireless and energy corporations. That, by design, is further placing Americans, especially children at risk of increasing DNA damage, mental illnesses, physical illnesses, diseases, drug dependency and much more.

July 8, 2023 People's Brains and Bodies Are Not Protected Against Attacks by Electromagnetic Waves and Neurotechnologies

The sixth generation of cell phone telephony plans to connect human brains to the internet. The human body is full of electrical and electromagnetic events and therefore can be controlled by electromagnetic radiation, which can have benign as well as harmful effects on its states. It may control even such events as is cell division or activity of neurons, as well as synchronized activity of masses of neurons in the brain and in this way produce "artificial" activity of the human nervous system.

Yes, thank you for saying this because I hate to inform people, but this has already been done, by Elon Musk and others as these people warn us of all the dangers of the world. Whitney Webb describes how we the people a power supply are being non consensually tokenized which simply means that our bodies are being sold as commodity on their secret stock and trade. Human Body Communication Human Body Area Networks, and Brain To computer interfaces are here and being done non consensually

Why is the title of the report "Likely Caused by 5G Tower Near School" and not "caused by"? Who dares to say "cause"?
Modern medicine has lost the path, and cannot find causes of signs, symptoms, illness, and diseases - because finding the cause would point to cures that are not drugs. Such conclusions cannot be tolerated in the current corporate government medical bureaucracies. To your health, tracy

A cell phone tower located outside of a dorm in San Diego caused brain cancers. in a number of students staying in this dorm...
Unseen Radiation is very dangerous. It's too bad that many do not know how dangerous electronics can be. It's incredible, some parents let their small children play with cell phones..

Hardell is absolutely right. The unprecedented amounts of radio frequency radiation being put into our environment are dangerous and require stringent regulation to prevent impacts to people and the environment. Where is EPA??? Chasing a false flag of climate change and ignoring credible science that could save pollinators, the environment, and people.

RFR releases cellular gated calcium channels through a MAGNETIC effect, making our cells expel energy to restore their chemical balance. 5G, on top of all other stressors, results in extreme stress and free radicals that cause cancer. Is NH the only sensible state with at least partially cautious health protectiveness against the RFR assault??

RFR impact on the body is a function of frequency, power, waveform, and proximity. 5G spans much more frequencies than prior generations and has more "effective radiated power" due to beam-shaping which creates a more linear/concentrated signal. Being close to a 5G tower is bad, however, the cell phone next to your head/bed likely has more impact (on the user) than the 5G tower 600m away. (You should not sleep next to your cell phone, and should put it on airplane mode if possible). Parents should protest the close 5G tower, but the wifi and cell phones in schools also need to go. Many schools now rely on wifi and make children carry networked laptops. The numerous close-proximity laptops/wifi and constantly-radiating radiating cell-phones likely exceed the IMPACT of the nearby tower. We need a holistic solution , but are still blind to even a partial solution. We have allowed yet another environmental catastrophe to "sneak up" on us by our ignorance and laziness.

And now they have decided to never question the cell towers again - or the cell phones. Guess ignorance is bliss for most people. I do put my cell on airplane mode and away from my head while sleeping. I also always put something between me and it if I am playing a game - something plastic and dense. This is all crazy, isn't it? How much they are willing to do to allow money to get into their pockets? I guess they don't think it'll affect them - and when it does, it is going to be too late to do anything about it.

Why not purchase 🇺🇸 USA Military grade satellite phones??
That costs a lot of money.

Why not go back to old school and get Liscences to use HAM radios??
Classes and tests are required.

Why not learn 🇺🇸 American Sign Language??
Classes are required.

I personally need to learn HAM radio and get my license and learn 🇺🇸American Sign Language.

Some of the RF values within the boy's home are not safe either. They should take some shielding measures, especially in his bedroom. He is already somewhat electrically sensitive to some degree, and he doesn't need to develop a sensitivity to ordinary AC electrical items.
